PROTECTING LIVES

ARC FLASH & FLAME RESISTANT GARMENTS

2026

TRUST THE ARC FLASH SPECIALISTS
WWW.PROGARM.COM

EDITION 2

7 REASONS TO CHOOSE PROGARM TODAY

01

WE'RE THE ARC FLASH SPECIALISTS

We are 100% focused on Arc Flash and flame resistant clothing. When the lives of your team are at risk, isn't it better to trust a specialist?

02

INHERENT PROTECTION

Our unique VXS+ fabric is 100% inherent. This means the very fibres provide flame resistant protection for the life of the garment.

03

DURABILITY MATTERS

We're so confident that our Arc Flash garments last up to 70% longer than other leading brands that we provide a Lifetime Seam Guarantee.

04

QUALITY ASSURANCE

We hold ISO 9001 for Quality Management and Module D accreditation for our supply chain, demonstrating our absolute commitment to production quality at every stage.

05

RELIABLE SUPPLY CHAIN & MANUFACTURING

Our European manufacturing and large UK stockholding mean you can rely on us for consistent, on-time delivery. We maintain full control over quality, lead times, and flexibility to keep your workforce protected without delays.

06

PRACTICALLY PERFECT

Soft fabrics and handy pockets are for more than just style; your team are far more likely to wear the right PPE if they're comfortable and the garments are practical while working.

07

WE KEEP INNOVATING

As the industry leaders in innovation, we're always working to make good things better and are constantly working on the next generation of Arc Flash protection. Constant innovation keeps us well ahead of the pack.

ABOUT PROGARM

PROVIDING THE HIGHEST QUALITY ARC FLASH & FR PPE WHEN SAFETY IS PARAMOUNT

ProGARM was established with a clear mission: to provide the highest quality Arc Flash and flame resistant protective clothing to industries where safety is paramount.

From inception, we set out to innovate and improve upon existing protective garment technology, focusing on ultimate comfort, long-lasting wear, and superior protection.

We work with leading innovative fabric manufacturers to develop fabrics for performance, build garments for durability and comfort, and validate protection through stringent testing to relevant standards. Each product is traceable, repeatable, and built to perform in real-world conditions.

OUR VALUES GUIDE HOW WE WORK:

RESPONSIBILITY:

End-to-end ownership from design and materials to delivery and aftercare.

HONESTY:

Providing clear technical information and practical guidance, always focused on doing the right thing.

PASSION:

We approach with enthusiasm and relentless improvement driven by feedback from the field.

ATTITUDE:

Humble, hungry, and focused on solving problems efficiently.

INITIATIVE:

We deliver proactive support, training, and availability when operations can't slow down. We make things happen.

We support a range of sectors, including utilities, rail, manufacturing, and construction, to help teams select the right protection for their work environments.

PROGARM QUALITY THE FACTS

- ✓ 100% focused on Arc Flash & FR clothing
- ✓ 21 years protecting workers in high-risk industries
- ✓ 30+ countries supplied worldwide
- ✓ 1000+ customers supplied across the globe
- ✓ Same-day dispatch on stocked products to keep critical teams moving
- ✓ ISO14001 / ISO9001 / ISO27001 & Module D
- ✓ 250k users protected so far this year
- ✓ European factory in Bulgaria with over 100 employees

OUR HISTORY

2005

Workwear division created as Askas

2007

The ProGARM brand launched to meet demand for certified, comfortable FR clothing

2008

Tony Arnett joins, sharpening focus on Arc Flash and FR protection

2010

Supplying blue-chip clients including Balfour Beatty, Wincanton & Certas Energy

2013

Askas sold to focus solely on Arc Flash protection

2014

First major contract win: Amey (£850k)

2020

Adapted during COVID to support customers and protect jobs. Expanded product innovation and international reach

2022

Opened our own factory in Bulgaria

2023

Partnership with GORE-TEX® – one of only three approved licensees in Europe

2024

Set up ProGARM German entity to provide PPE to the DACH region

2025

Launched our Gen 2 product range

EUROPEAN MANUFACTURING

**EVERY PRODUCT WE PROVIDE
IS DESIGNED & MANUFACTURED
IN-HOUSE BY OUR OWN EXPERT TEAMS**

OUR MANUFACTURING JOURNEY BEGAN IN 2021 WITH AN AMBITION TO ESTABLISH OUR OWN FACTORY.

It was a bold step, driven by our commitment to delivering the fastest lead times in the industry and uncompromising quality for our customers. By 2022, that vision became a reality with the opening of our factory in Bulgaria.

Since then, we've built a team of over 100 people and achieved full certification. Taking full control of our production means we manage everything from materials to transport, giving us complete oversight of the manufacturing cycle. This results in a reliable supply for our customers, consistent quality, and resilience against the supply chain challenges that affect others.

PROVEN PRACTICES

OUR PROVEN PRACTICE FOR HIGH SAFETY STANDARDS

THERE ARE TWO TEST METHODS COMMONLY REFERRED TO UNDER THE IEC 61482-2: 2018 EUROPEAN STANDARDS: PROGARM GARMENTS ARE TESTED USING BOTH METHODS.

THE BOX TEST - IEC 61482-1-2

The Box test is the most widely used method for testing Arc Flash protective clothing. It replicates real-life arc fault conditions to check how clothing performs when it matters most.

WHERE IT'S USED:

- ✓ Energy suppliers & grid operators
- ✓ Medium & low-voltage plants
- ✓ Switchgear construction & maintenance
- ✓ Railway technology & municipal utilities

WHY IT MATTERS:

- ✓ Complies with DIN EN 61482-1-2 – meets strict European safety standards
- ✓ Tests full garments – not just fabric, but seams, zips, fasteners & accessories
- ✓ Real-world safety – proves protection under thermal and arc fault stress

WHAT TO LOOK FOR:

Certified PPE is marked with:

- ✓ Protection class (APC1/ Class 1 or APC2/ Class 2)
 - ✓ Standard reference (DIN EN 61482-1-2)
 - ✓ Compatibility details (e.g. gloves, helmets, visors)
-

OPEN ARC TESTING - IEC 61482-1-1

The Open Arc test (IEC 61482-1-1) assesses the performance of protective clothing under an open electrical arc, a type of exposure that workers may encounter in real-world industrial environments.

Unlike the Box test, which uses a confined space, the Open Arc test measures the Arc Thermal Performance Value (ATPV/ELIM) of a fabric or garment, showing exactly how much energy it can withstand before a burn occurs.

This provides quantitative, globally comparable data that helps employers select the right PPE for both local and international standards, ensuring workers are protected in extreme conditions.

OPEN ARC TESTING BOX TEST

INNOVATION

AT PROGARM, WE LEAD WITH INNOVATION & CONTINUALLY SEEK WAYS TO ADVANCE ARC FLASH PROTECTIVE WEAR INTO THE FUTURE

That means developing our exclusive VXS+ inherent fabrics for unmatched protection and comfort, working with GORE-TEX® to deliver breathable, weather-resistant solutions, and designing inclusive fits so every worker has PPE they can rely on.

And we're not stopping there, we're constantly exploring new materials and smarter design approaches to make our products perform even better, keeping workers safer than ever before.

VXS+ INHERENT FABRICS PROVIDE THE ULTIMATE PROTECTION.

Unlike chemically treated fabrics, the very fibres of inherent fabrics are flame resistant, and because that protection doesn't wash out, the wearer stays safe throughout the garment's life.

For decades, flame resistant garments have meant uncomfortable, heavyweight cotton drill fabrics that would shrink extensively with washing. This all changed with the introduction of our VXS+ inherent fabric.

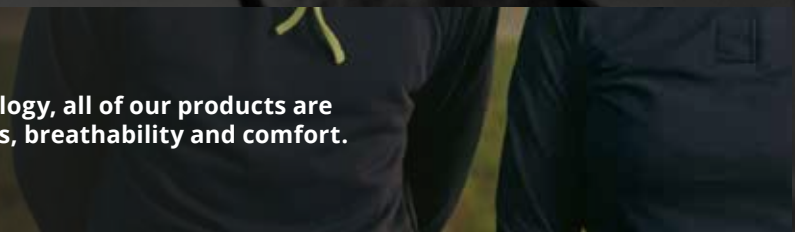

✓ INSTANT EXTINGUISHING PROPERTIES

The fibre blend of our VXS+ inherent fabrics offers outstanding performance compared to more expensive aramid fabrics.

✓ GREAT COMFORT

Using advanced textile technology, all of our products are designed for optimum softness, breathability and comfort.

✓ HIGHLY DURABLE

After 50 industrial washes, our garments outlive, outshine and outclass the competition in durability, appearance and strength, with excellent colour fastness and less than 3% shrinkage.

GORE-TEX® TECHNOLOGY

**WE ARE PROUD TO BE ONE
OF ONLY THREE APPROVED
LICENSEES IN EUROPE USING
INNOVATIVE GORE-TEX PYRAD®
STRETCH TECHNOLOGY**

**This innovative technology allows us to create garments
that stay lightweight and comfortable when wet or dry.**

GORE-TEX® fabric is engineered so that sweat vapour can escape, to avoid a build-up of heat and perspiration, and can also easily withstand high water pressure and severe mechanical stress over many years. With this level of comfort and protection, workers can focus on the job at hand and work for long periods outdoors in tough conditions.

DURABLY WATERPROOF

GORE-TEX PYRAD® Stretch keeps out wind and rain, helping wearers stay warm and dry without sacrificing safety with quick re-dry times.

ARC RATED PROTECTION

On arc exposure, GORE-TEX PYRAD® Stretch fabric blocks heat flow and prevents flames from spreading by forming a protective char layer. This keeps the fabric intact and reduces heat transfer to the skin.

LIGHTWEIGHT

Up to 45% lighter than comparable garments, this range is designed to provide the ultimate lightweight flexibility and comfort, even when wet.

BREATHABLE

The double-layer fabric technology reduces the build-up of heat and perspiration so that moisture can escape for extra comfort.

STRETCH

Designed to increase freedom of movement for unrestricted bending, stretching and kneeling.

FEMALE FITS

WE BELIEVE EVERYONE DESERVES PPE THAT FITS

For too long, women in industries like utilities, construction, and power generation have had to make do with kit designed for men.

Not only is that uncomfortable, but it can also put them at greater risk. We've changed that.

What makes our approach different is that our women's range is designed by female designers who know first-hand what matters. They think about the details, like how garments move with the body, where protection panels sit, and how to balance safety with comfort. That's why our range is one of the most inclusive out there, from coveralls and trousers to base layers and even the world's first Arc Flash bra.

By offering inclusive fits across a wide variety of sizes and lengths, ProGARM helps businesses protect every member of their workforce equally.

Chantelle
National Gas Transmission

// For 8 years, I wore men's PPE, which meant when ordering the right chest size, the sleeves and legs were too long, or the crotch sat far too low. After trialling ProGARM women's PPE, the difference was remarkable. A perfect fit, lighter fabric and much more comfort and freedom to move. //

OUR INNOVATION DOESN'T STOP **HERE**

AT PROGARM, WE NEVER STAND STILL

We're always looking for ways to improve our PPE, whether that's enhancing comfort, improving protection, or finding smarter design solutions.

Innovation is at the heart of everything we do, and it's driven by one clear focus: **keeping people safe.**

A big part of that comes from working closely with our customers. By listening to their experiences and understanding the challenges they face every day, we're able to design PPE that really works for them. That collaboration means our garments aren't just technically advanced, but they are also practical, comfortable, and built around the needs of the people who wear them.

HOW WE DO THIS:

92%

Wearer trials win
rate due to product
quality/comfort

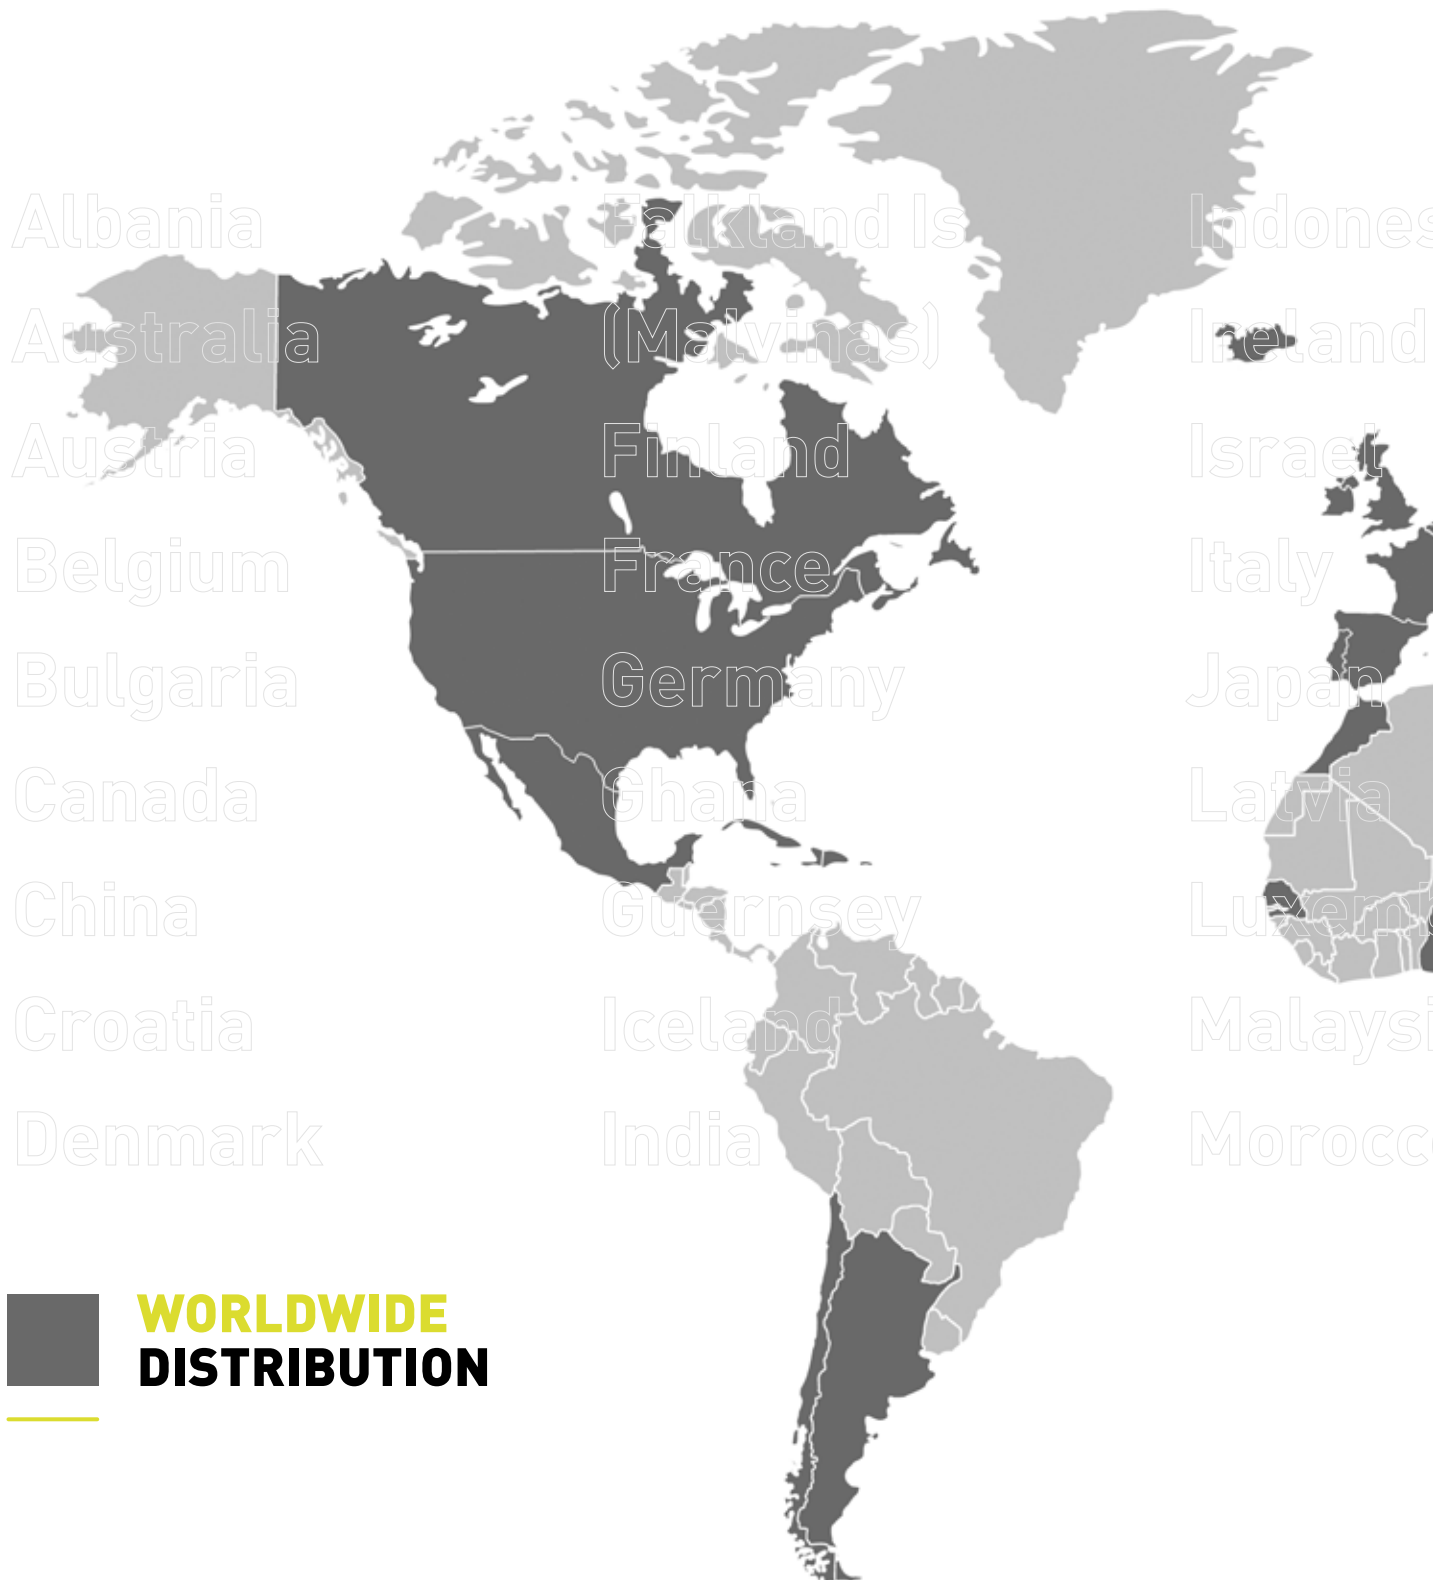

Regular check-ins
with customers
& distributors

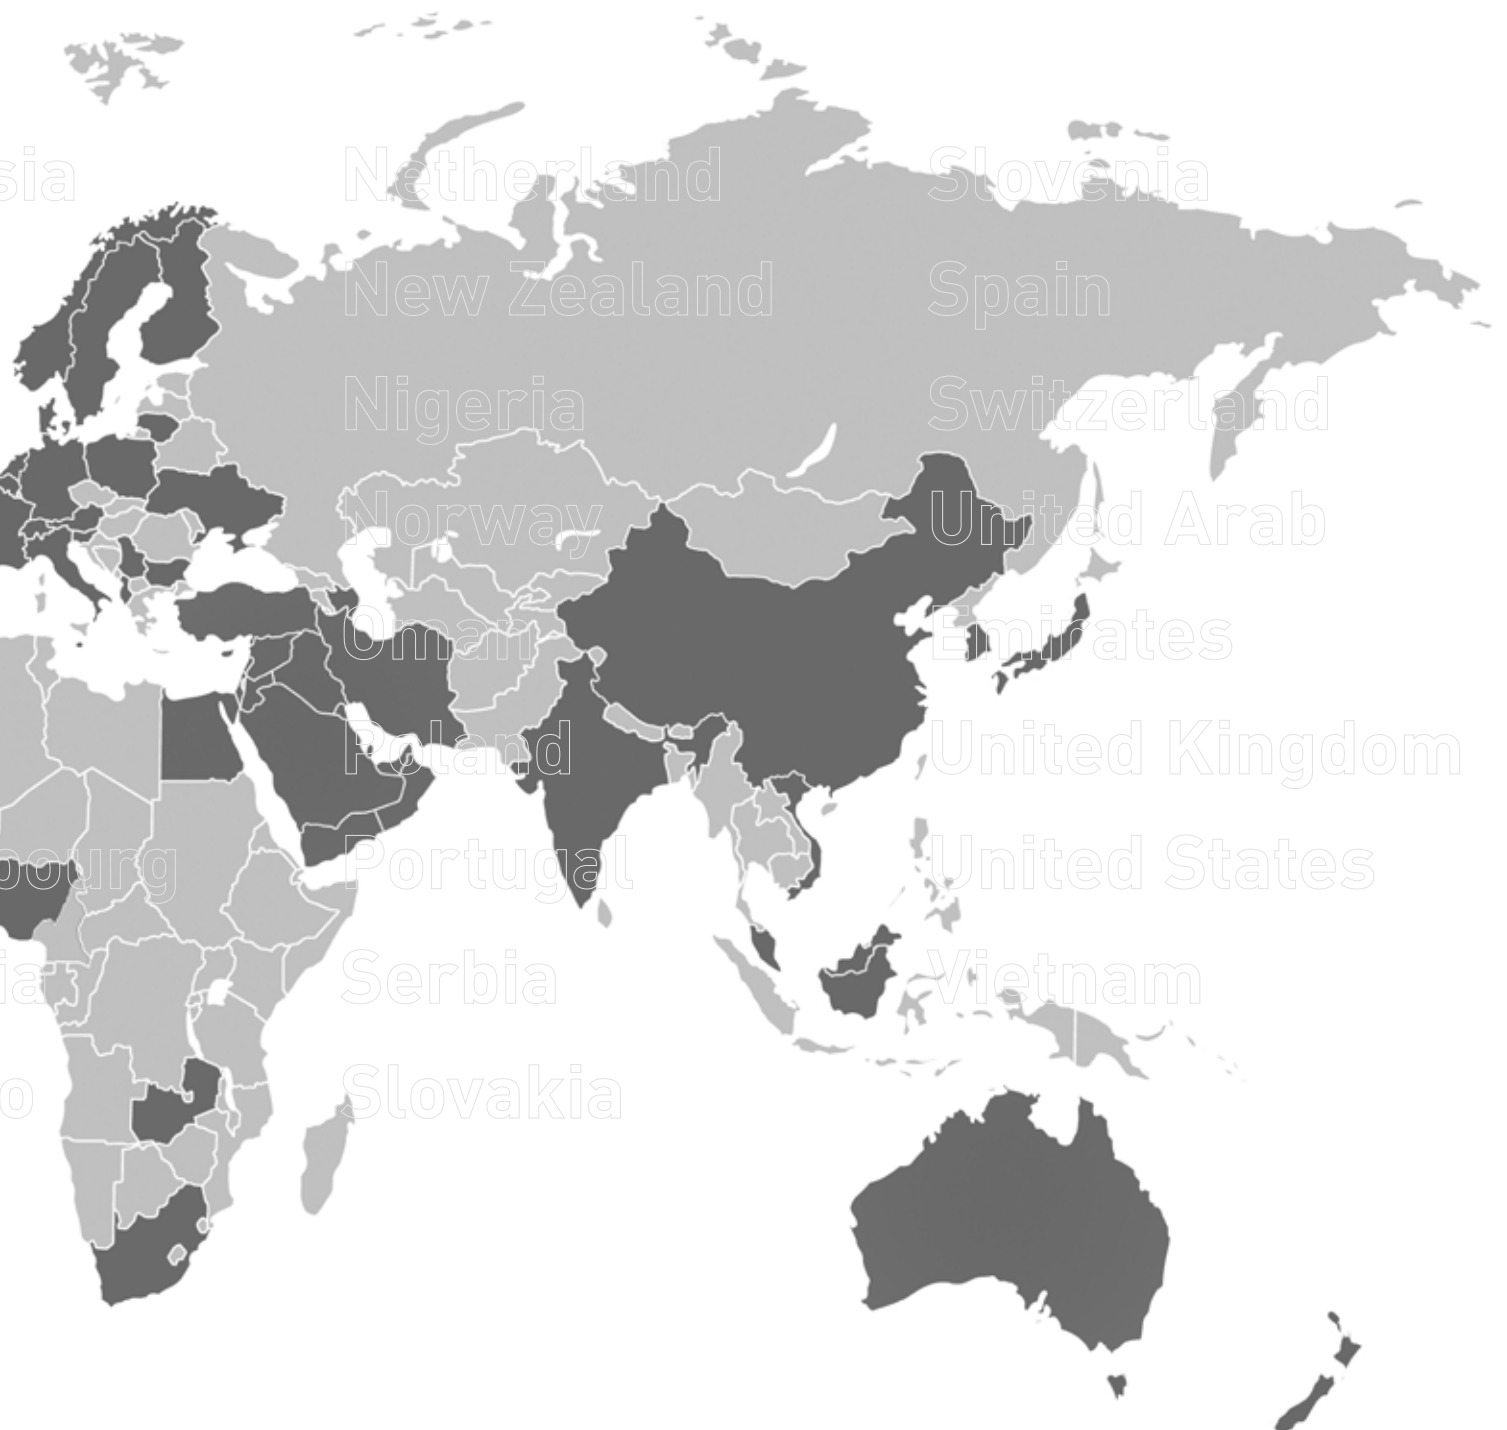

Working with like-minded
companies to continuously
learn & evolve

INNOVATION
DOESN'T STOP

OUR SAFETY WORLDWIDE

From Europe, the Middle East, and beyond, we support customers operating across the world. Our products are trusted to keep teams safe wherever the job takes them. Below is a snapshot of our global reach in action.

ARC FLASH INSIGHTS

SOME FACTS ABOUT ARC FLASH

An Arc Flash occurs when an electrical discharge travels through the air and releases an intense burst of energy. This flash can cause serious and fatal harm to anyone caught by it.

An electric arc, also known as an arc discharge, occurs when an electrical discharge or short circuit moves through the air. Voltage spikes, worn connections, cable strikes or gaps in insulation are just some of the reasons why an Arc Flash occurs. A flash of intense energy is the result.

The energy expelled by an Arc Flash event can be deadly, with temperatures reaching up to 35,000°F or more than 19,000°C. It goes without saying; this can burn clothing and human skin within fractions of a second, even if the operative is situated five or six metres away from the Arc Flash event.

An Arc Flash can result in an explosive pressure wave that can throw workers across the room and a sound blast that can rupture eardrums. It is also accompanied by a bright flash which can cause temporary or even permanent blindness. Not only this but blast vaporises metal and sends particles at speeds of 700MPH which can penetrate the body like shrapnel.

4 times hotter than the sun

2/3 of arc incidents are as a result of human error

Droplets of molten metal move at 700MPH

Copper expands at 67,000 times its volume during an Arc Flash.

A small pea-size piece of copper can expand to the size of a bus!

Availability & Supply Chain

Downtime costs lives and money. When PPE isn't available, workers are left exposed. Reliable supply is critical, anything less is a risk no business can afford.

Comfort VS Protection

Teams are often forced to choose between staying safe and staying comfortable. Discomfort leads to shortcuts, and shortcuts cost lives. Our garments are made with both safety and comfort in mind.

Fit & Inclusivity

For too long, female professionals have had to compromise with ill-fitting PPE. A poor fit is not only uncomfortable but it also reduces protection and increases risk.

Awareness & Training Around Arc Flash

Arc Flash isn't widely understood. Without awareness and training, the danger is underestimated, and PPE is misused, leaving workers vulnerable to major injury.

We make it our mission to ensure our customers teams are fully aware of the dangers on the job and prioritise education on Arc Flash risks.

We can provide hands-on workshops focused on the risks of incidents in your sector and explain how wearing the correct layers of PPE is essential. See how we did this for Crown Highways via the QR code below.

Complex Compliance & Standards

Multiple regulations, evolving standards, and different industry requirements create confusion. Misinterpretation leads to mistakes and mistakes when it comes to Arc Flash, aren't minor.

Correct Usage of PPE

Even the most advanced PPE can't protect if it's not worn correctly. Every unfastened zip, every missed layer, increases exposure to life-threatening risk. Our team always aim to educate users on the importance of layering, correct cal rating and ensuring you're fully covered.

Durability & Lifecycle

PPE that breaks down too quickly creates exposure, extra cost, and waste. Long-lasting protection is the only answer and our products last up to 70% longer than other leading brands. In fact, we're that confident, we offer a Lifetime Seam Guarantee.

Risk Assessments & Hazard Levels

Without accurate assessments, workers are left either under-protected or over-specified. Both are dangerous, both are costly, but both are avoidable. Our team are on hand to support with PPE audits and assessments to ensure your team have the right kit for the job.

Scan the QR code for case studies, whitepapers & E-learning

HOW WE DO THINGS

PROGARM QUALITY

As well as improving safety, our continuous focus on quality means our garments lead the way in comfort, practicality and durability, giving you outstanding value for money by standing up to the rigours of everyday use for longer.

PRODUCT DEVELOPMENT

We listen to our customers and end users, taking on board feedback and suggestions to develop all our styles, ranges and innovations.

UNIQUE PROGARM DESIGNS

Developing our own designs means we can constantly innovate and improve. We can also accommodate any special design requirements that you need.

ISO9001 & MODULE D

As well as ISO9001, we are Module D accredited, demonstrating our commitment to high quality standards throughout our supply chain.

The Result:

- ✓ Better materials
- ✓ Efficient manufacturing
- ✓ An outstanding customer product

TOP CLASS PRODUCTION

We don't compromise.
Every garment is built to protect, perform and to last.

100%

Focused on Arc Flash & Flame resistant safety wear

Committed to innovation & durability

Dedicated to quality control

COST IN USE CASE STUDY: CONSTRUCTION COMPANY

Our garments are built tough, with built-in arc protection and materials that can handle repeated industrial washes and the harshest conditions. That means fewer replacements, less downtime, and real savings over time.

In short: your team stays protected, your operations run smoother, and your budget stretches further. With ProGARM, you're investing in safety that lasts day in, day out. See opposite a real-life example of how our garments save money for our customers in the long run.

Cost in Use Case Study	Competitor Product	ProGARM Product
Number of Wearers	1,000	1,000
Average Garment Lifespan	24 Weeks	43 Weeks
Price Per Garment	£76.95	£97.30
Total Annual Spend	£166,725	£117,665
Total Annual Savings		£49,060

GOING THE EXTRA MILE

Certified quality from start to finish.

ISO 9001

Proven robust processes & customer service

Module D Accreditation

Quality control across the entire supply chain

Auditing

Independent audits of all partners

Full Traceability

Every batch certified, every garment labelled

RIGOROUS TESTING = YOUR REASSURANCE

Every detail tested.

As part of our rigorous quality control, we test EVERY garment design for protection against Arc Flash. We repeat testing as often as prescribed under the EN Standard but, in practice, we're innovating so regularly that we're usually testing upgraded garments before previously released versions are due to be re-tested.

✓ Arc Flash Testing

Arc Flash testing on every design – often ahead of schedule

✓ Component Checks

Component checks (zips, buttons, press studs) to guarantee performance in critical moments

✓ Structural Integrity Testing:

Structural integrity testing: seams, flame spread, Arc Flash resistance, day-to-day durability

✓ Guarantees

Lifetime Seam Guarantee – we stand behind our work

PROTECTION IN LAYERS

LAYERING SAVES LIVES

Wearing Arc Flash and Flame resistant garments together doesn't only add protection but it also multiplies it.

The wrong fabrics underneath protective clothing can still cause serious injury. That's why we offer a full range of soft, breathable, and comfortable garments, designed to work together as a system.

Why Layering Matters

Each layer adds more than its own protection. The air trapped between layers acts as insulation, boosting the overall protection level, often beyond the sum of the parts.

Arc Rated Categories

Arc Flash protection is measured in categories – from 1 (lowest) to 4 (highest) – based on the energy level a task may expose you to.

Some jobs require multiple layers to reach the right level of protection, and this will be identified by your employer through an Arc Flash risk assessment.

In this brochure, ARC 1–4 refers to ELIM ratings.

Where ELIM is not available, ATPV/EBT ratings are shown.

LAYERING SAVES LIVES

DEVELOPING TOGETHER

At ProGARM, we believe the best protection is built in partnership.

That's why our Path to Purchase focuses on collaboration at every stage – from understanding your environment to creating garments that perform for the wearer.

The result? PPE that's not only compliant, but comfortable, practical, and designed for the real risks your team faces.

Case Studies Customer-Led Product Development:

Clancy Group

Clancy Group required enhanced protection for teams working around underground services. In response, we developed the 2800 Arc Cover, a solution that led to a 750-unit order from Cadent Gas and subsequent adoption by multiple end users.

Freedom Group

Freedom Group needed coveralls that were easier to don and doff on site. We introduced a higher leg zip, a practical improvement that is now standard across all GEN 2 coveralls.

Contact

Speak to our team of experts to begin exploring your Arc Flash PPE options

Discovery

Prepare for some unexpected questions, as we delve into your requirements to find you the best solution

Wearer Trials

Trial our Arc Flash garments and let your team feel the benefits for themselves

Place Order

Our dedicated sales teams will guide you through the order process

Sizing

The ProGARM Sizer app makes it simple to quickly find the perfect sizes for your entire team

Manufacturing

If your order requires manufacturing, this is completed in-house at ProGARM using the highest quality fabrics

Delivery

In stock items can be delivered next day, manufactured items can be delivered in a matter of weeks

Aftercare

Your garments achieve extended protection with our laundry, maintenance and repair services. We also offer safe disposal through our recycling service

COMFORTABLE, PRACTICAL,
& DESIGNED FOR THE REAL
RISKS YOUR TEAM FACES

ARC FLASH PROTECTION EXPERTISE IN YOUR SECTOR

UTILITIES

HSG47 highlights the significant risk of a cable-strike during groundworks and the potentially life-changing injuries or fatal consequences of an Arc Flash incident.

ELECTRIC VEHICLES

For those working in the production and servicing of electric vehicles, the known risks are evolving all the time. Increasingly, we are seeing that the risk profile is closely mirroring that of industries known to work with high and low voltage electrical equipment.

INDUSTRIAL ELECTRICAL

The EU and HSE are specifying increasing levels of Arc Flash and Flame resistant protective clothing. We can help you make the right choices.

RAIL

Our comprehensive range of hi-vis orange garments comply with RIS-3279-TOM (replacing UK GO/RT 3279) and are safe, durable and comfortable for groundworks and electrification projects.

POWER GENERATION

We understand power stations, renewables and transmission environments, and help safeguard your team against both Arc Flash incidents and the weather as needed.

WINDPOWER

Not only do we understand the specific risks in this sector, but our garments will provide excellent protection against the elements, keeping your team warm and dry as well as the Arc Flash protection to keep them safe.

PETROCHEMICAL

The similarities between Arc Flash and flash fire incidents mean we've become an established and trusted provider of safety clothing in the petrochemical sector.

SUSTAINABILITY

OUR SUSTAINABLE ARC FLASH PPE PROVES SAFETY & SUSTAINABILITY CAN GO HAND IN HAND

Built with recycled fabrics and smarter processes, our sustainable range protects people and the planet, lasting longer, reducing waste, and lowering carbon miles without ever compromising on safety.

MEASURING GUIDE

Measurements must be taken wearing clothing usually worn underneath waterproof outerwear. The tape measure should be fairly loose and not pulled too tight.

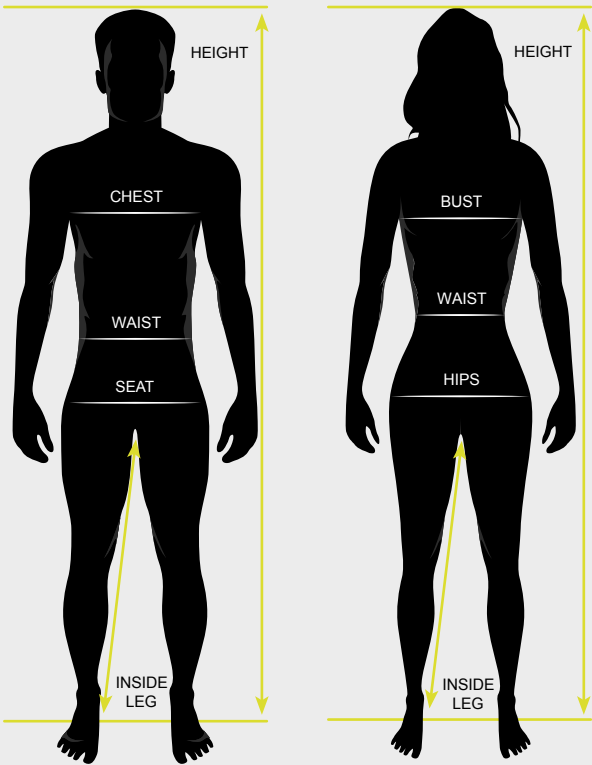

- ✓ **CHEST/BUST** - measure under the arms at the fullest part around the chest horizontally with arms by your side
- ✓ **WAIST** - measure around the natural waistline at the fullest part
- ✓ **SEAT/HIP** - with the feet together measure around fullest part of the hips
- ✓ **HEIGHT** - with bare feet together measure from the top of the head to the floor
- ✓ **INSIDE LEG** - in bare feet take the measurement from the top of the inside leg and measure down the inside leg to the floor

Once measurements are taken compare them to the fit guide measurement tables to find your garment size.

When fitting the trouser, if the waist and seat measurements fall into different size categories then choose the larger size to ensure the trouser is not too close fitting.

If the height and inside leg measurements fall into different length categories then choose the jacket length based on the height measurement and the trouser length based on the inside leg measurement.

Please note when using the measurement tables that all manufacturing tolerances and standard garment over-measures have been taken into account. This ensures any slight variances in manufacture or fabric shrinkage after washing will not affect the fit of the garments.

WEARER FIT GUIDES

* PRODUCT AVAILABILITY

Not all sizes are available, and lead times will apply for some fit and size combinations.
Contact us to find out specific details.

MEASURING GUIDE

Measurements must be taken wearing clothing usually worn underneath waterproof outerwear. The tape measure should be fairly loose and not pulled too tight.

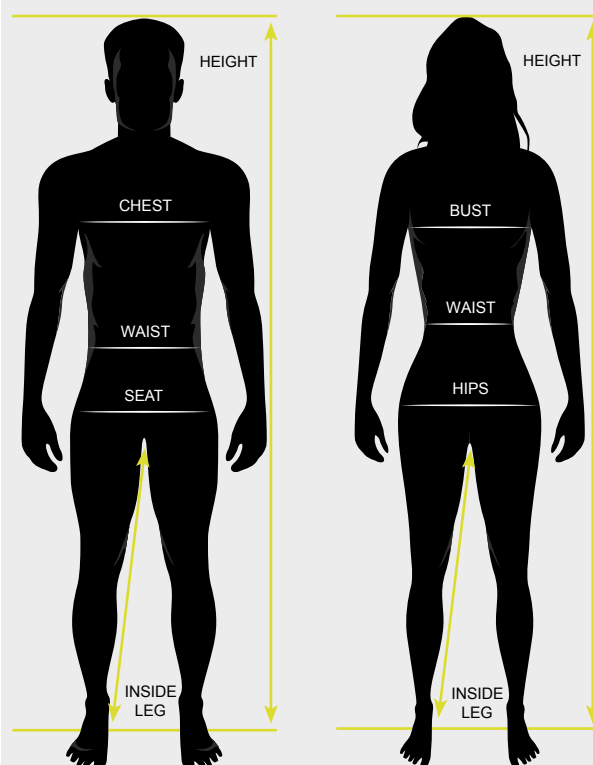

- ✓ **CHEST/BUST** - measure under the arms at the fullest part around the chest horizontally with arms by your side
- ✓ **WAIST** - measure around the natural waistline at the fullest part
- ✓ **SEAT/HIP** - with the feet together measure around fullest part of the hips
- ✓ **HEIGHT** - with bare feet together measure from the top of the head to the floor
- ✓ **INSIDE LEG** - in bare feet take the measurement from the top of the inside leg and measure down the inside leg to the floor

Once measurements are taken compare them to the fit guide measurement tables to find your garment size.

When fitting the trouser, if the waist and seat measurements fall into different size categories then choose the larger size to ensure the trouser is not too close fitting.

If the height and inside leg measurements fall into different length categories then choose the jacket length based on the height measurement and the trouser length based on the inside leg measurement.

Please note when using the measurement tables that all manufacturing tolerances and standard garment over-measures have been taken into account. This ensures any slight variances in manufacture or fabric shrinkage after washing will not affect the fit of the garments.
